

1. Hello every one , Good Morning

I'm Vidhin Patel. jeet & jeneesh Patel is my group member

Our project name is Employee Management System

2. Contents:

We covers ,

What is Ems ?

software requirements

objective for our project.

Flow-charts

Output of project

purpose

Scope

Advantages

Dis Advantages

Conclusion in our presentation

3. first What is Ems?

It's one type of Application which can maintain the details of employee working in company

It maintains the information about various types like personal & officials.

4. We can see, required software of our project.

Our project is making in java language & we use eclipse for java IDE.

& We also use Xampp for my sql database.

5. Objective for our project

Our project explain that task of maintaining records of employee or customer of company.

It store employee information & it's also store provide functional reports.

Objective of our project is including or dealing will all.

6. Here, flowchart of our project

First of all there will be a

login page - inside we have three sections signup & forgot password features are available .and if you Success fill username & password you can log in & come to home page

In home page 4 options available employee ,salary, attendance and about

In employee also have a 4 options like a - add employee, View Employee, update employee, and Remove Employee

in salary have 3 option – add salary , update salary ,and generate payment slip of salary

While in attendance will only have 2 options – Fill or take attendance , and View attendance

At the last About section

We see some important outputs of our project

7. Output of login page

Put correct username & password... and continue with login button

Here new user have also signup there account with security question features

& here forget password system is also available.

8. Output of Home page

As per discuss in flowchart employee , salary, attendance & about option is available

9. Output of Employee page

In employee page As per discuss in flowchart Add employee , view employee , update employee & remove employee option is available

10. Output of Salary page

You can see out put of salary page – add salary, update salary & generate payment slip available

11. Output of attendance page

While In attendance page we have a 2 options like a -fill & view attendance to Managers employee attendance.

12. Here, purpose of our project like a

It's manage employee in a better way.

it's very easy to find information related to employee.

It give date of hiring and retirement.

it's also maintains the salary ,attendance & event's.

13. Here, scope of our project like a

Project work in PC's with employee & it's very easy

At the same time we can editing or update in employee details.

14.A lots of advantages of project like a

Provide computerized system for maintaining records.

More efficient & reliable.

Less time consuming and easy to use.

Huge data storage with less computer memory.

Avoid Human errors & efforts for Maintaining daily data.

Avoid Data manipulations.

Also avoids Data inconsistency & redundancy

(SAME IN PPT READ)

15.Some disadvantage like a

Everyone can excess data

Confidential & security risk

Lack of experience

(SAME IN PPT READ)

16.Conclusion

The whole project in operated by computerizing system. employee management work in offices, schools, library. Etc.

This software keep's record of employee's work, Attendance. And generates the salary slips.

It's easy to store information & news of employee.

17.THANK YOU EVERYONE

Wait for asking questions

- Answer must be starting from “ we can “
